
Keesamax.com

Website Revamp Plan

Complete technical specification, design direction, content strategy, and deployment guide for rebuilding keesamax.com with Next.js on Vercel.

Prepared for: Andrew Lee | Keesamax Sdn Bhd

Prepared by: Jovan

Date: 18 April 2026

Version: 1.0

Domain: keesamax.com

Hosting: Vercel (Free Tier) | DNS via Plesk

Note: This document is intended to be used as a reference when building the new site with Claude Code. All sections contain actionable specifications.

13. Image & Asset Strategy
14. Timeline & Phases

1. Project Overview & Objectives

Keesamax Sdn Bhd is a boutique recruitment firm based in Malaysia, operated by husband-and-wife team Andrew Lee and his partner. The company specializes in executive headhunting, recruitment of skilled professionals, and career coaching across Southeast Asia. Established as Keesamac Enterprise in 2013 and incorporated as Keesamax Sdn Bhd in January 2024 (Reg: 202401002894 / 1548744-K).

The current website at keesamax.com is built on WordPress with Elementor, hosted on Plesk (MSC Hosting). The objective is to rebuild the website from scratch using Next.js and deploy on Vercel, creating a sleek, modern, and fast-loading site that reflects the boutique and premium nature of the firm.

Project Goals

- Replace the existing WordPress/Elementor site with a custom Next.js application
- Achieve a modern, clean, premium design that conveys trust and professionalism
- Improve page load speed and Core Web Vitals significantly
- Maintain or improve existing SEO rankings during migration
- Deploy on Vercel free tier with DNS managed through Plesk
- Ensure the site is easy to update (content stored in simple data files or CMS)
- Mobile-first responsive design
- Remove existing green popup/banner from the old site

2. Current State Assessment

Current Technology Stack

Component	Current	Notes
CMS	WordPress 6.9.4	Hosted on Plesk (MSC Hosting)
Page Builder	Elementor (with Pro features)	Theme Builder, Popups, Floating Elements
PHP Version	8.2.30	Running on LiteSpeed
SEO Plugin	Rank Math SEO	Active, handling meta tags and sitemap
Caching	LiteSpeed Cache	Server-level caching
SSL	Let's Encrypt	Auto-renewed via Plesk
Domain Registrar	Managed via Plesk DNS	keesamax.com
Server IP	103.6.198.132	Shared hosting on MSC Hosting
Contact Form	Elementor form (with file upload)	CV upload capability
WhatsApp	wa.me/60163335597	Direct WhatsApp link

Current Site Issues

- Green popup/banner appearing on the site (to be removed in redesign)
- WordPress/Elementor adds significant bloat and slow load times
- Design looks dated and does not reflect premium boutique positioning
- Job listings are hardcoded in HTML, difficult to update
- No social proof section (client logos) despite working with major brands
- Mobile experience could be significantly improved

Current Content Inventory

The existing site is a single-page site with the following sections:

- **Navigation:** What we do, Why use us, Who we are, Jobs Available, Get in touch
- **Hero:** 'Connecting Talent, Inspiring Growth' / 'Your career is a journey'
- **What We Do:** Three service pillars with images (Recruitment, Headhunting, Career Coaching)
- **Why Use Us:** Tailored solutions, multilingual team, diverse backgrounds
- **Who We Are:** Company history from 2013, geographic reach, industry coverage
- **Jobs Available:** ~32 active job listings across industries and locations
- **Contact:** Form with name, email, phone, message, and CV upload

- **Footer:** Company registration number, WhatsApp link, Exabytes credit

3. Architecture & Tech Stack

Recommended Stack

Layer	Technology	Rationale
Framework	Next.js 15 (App Router)	SSG for performance, React ecosystem, Vercel-native
Language	TypeScript	Type safety, better DX, fewer bugs
Styling	Tailwind CSS 4	Utility-first, fast iteration, consistent design
Animations	Framer Motion	Smooth scroll animations, section reveals, micro-interactions
Icons	Lucide React	Clean, consistent icon set
Forms	React Hook Form + Zod	Lightweight validation, good UX
Email Backend	Resend or Formspree	Serverless email sending for contact form
Fonts	next/font (Google Fonts)	Self-hosted, no CLS, Inter + optional serif
Images	next/image	Auto optimization, lazy loading, WebP conversion
Deployment	Vercel (Free Tier)	Auto CI/CD from GitHub, edge CDN, preview deploys
DNS	Plesk (existing)	Only A/CNAME records changed, MX records preserved
Analytics	Vercel Analytics or Plausible	Privacy-friendly, lightweight
CMS (Optional)	MDX files or Notion API	For job listings that change frequently

Key Architectural Decisions

Static Site Generation (SSG)

The site should be built as a fully static export where possible. A recruitment firm's brochure site changes infrequently, so pre-rendering all pages at build time gives the best performance. Job listings can be stored in a JSON or MDX file and updated via a simple git push, which triggers an automatic Vercel rebuild.

Single Page Application with Sections

Maintain the single-page structure of the current site (anchor links for each section) but built as a proper Next.js app. This keeps the user experience simple and the navigation intuitive. The App Router can handle this with a single page.tsx that composes all sections, with smooth scroll behavior.

Content as Data Files

All text content, job listings, and client logos should be stored in structured data files (TypeScript constants or JSON). This makes it trivial for anyone to update content without touching component code. If the client later wants a CMS, Notion API or Contentlayer can be added without refactoring.

4. Hosting & Deployment Strategy

Vercel Deployment (Free Tier)

The site will be deployed on Vercel's free Hobby plan.

Feature	Free Tier Limit	Keesamax Usage
Bandwidth	100 GB/month	Minimal (brochure site ~80 MB/month currently)
Serverless Functions	100 GB-hrs/month	Only needed for contact form API route
Builds	6,000 mins/month	More than enough for occasional updates
Team Members	1 (Hobby)	Sufficient since Jovan manages it
Preview Deployments	Unlimited	Every PR gets a preview URL for Andrew to review
Custom Domains	Supported	keesamax.com + www.keesamax.com
SSL	Automatic	Free, auto-renewed
CDN	Global Edge Network	Faster than current single-server Plesk hosting

Deployment Workflow

1. Push code to GitHub repository (e.g., github.com/jovan/keesamax)
2. Vercel automatically detects Next.js and builds the project
3. Every push to 'main' branch deploys to production (keesamax.com)
4. Every push to other branches creates a preview deployment with a unique URL
5. Share preview URLs with Andrew for approval before merging to main

DNS Migration (Plesk)

In the Plesk panel under Hosting & DNS, update the following DNS records. Critical: Do NOT modify MX records if email is hosted on the Plesk server.

Record Type	Host	Value	Action
A	@	76.76.21.21	Update existing A record to Vercel's IP
CNAME	www	cname.vercel-dns.com	Update/Add CNAME for www subdomain

Record Type	Host	Value	Action
MX	@	(keep existing)	DO NOT CHANGE - preserves email
TXT	@	(keep existing)	DO NOT CHANGE - preserves SPF/DKIM

Important: After updating DNS, add [keesamax.com](#) as a custom domain in Vercel's project settings. Vercel will automatically provision an SSL certificate. DNS propagation may take up to 48 hours.

5. Site Structure & Page Map

The site remains a single-page layout with smooth-scroll anchor navigation. Each section is a React component composed in the main page.

Section	Anchor	Component	Purpose
Navigation	-		Sticky top nav with logo, anchor links, CTA button
Hero	#hero		Full-viewport hero with tagline and CTA
Social Proof	#clients		Logo carousel of companies worked with
Services	#services		Three service pillars (Recruit, Headhunt, Coach)
Why Us	#why-us		Differentiators and value propositions
About	#about		Company story, timeline, geographic reach
Industries	#industries		Industry badges/tags showing coverage
Job Listings	#jobs		Filterable/searchable job board
Contact	#contact		Contact form + WhatsApp CTA + company details
Footer	-		Company reg, links, copyright

New Additions vs. Current Site: Social Proof section (client logos), Industries section, and a filterable Job Listings component are new. The green popup/banner from the old site is intentionally excluded.

6. Design System & Visual Direction

Design Philosophy

The design should communicate: **trust, professionalism, boutique exclusivity, and warmth**. Keesamax is not a faceless corporate agency; it's a personal, relationship-driven firm. The design should feel premium but approachable, modern but not cold.

Visual References & Mood

- Clean, generous whitespace (not cluttered)
- Subtle animations on scroll (fade-up, slide-in) using Framer Motion
- Dark navy text on white/light backgrounds for readability
- Accent color used sparingly for CTAs and highlights
- Professional photography (AI-generated or stock) with warm, natural tones
- No stock-photo cliches (no handshakes-in-front-of-buildings)
- Greyscale logo strip for social proof (color on hover)

Color Palette

Name	Hex	Usage
Navy (Primary)	#0F172A	Headings, navbar, footer background
Slate	#334155	Body text, secondary headings
Blue (Accent)	#2563EB	CTA buttons, links, active states, highlights
Blue Light	#DBEAFE	Subtle backgrounds, hover states, badges
White	#FFFFFF	Page background, card backgrounds
Gray 50	#F9FADF	Alternating section backgrounds
Gray 200	#E5E7EB	Borders, dividers
Emerald	#059669	Success states, 'Active' job badges
Amber	#D97706	Warning states, 'Urgent' job badges

Typography

Element	Font	Weight	Size (Desktop)	Size (Mobile)
H1 (Hero)	Inter	800 (ExtraBold)	56-64px	36-40px
H2 (Section Title)	Inter	700 (Bold)	36-40px	28-32px

Element	Font	Weight	Size (Desktop)	Size (Mobile)
H3 (Card Title)	Inter	600 (SemiBold)	20-24px	18-20px
Body	Inter	400 (Regular)	16-18px	15-16px
Small / Caption	Inter	400	14px	13px
Nav Links	Inter	500 (Medium)	15px	15px
CTA Button	Inter	600 (SemiBold)	16px	15px

Font Loading: Use next/font to self-host Inter from Google Fonts. This prevents CLS (Cumulative Layout Shift) and ensures the font loads instantly. Apply font-display: swap as fallback.

Spacing & Layout

- **Section Padding:** py-20 (80px) on desktop, py-12 (48px) on mobile
- **Container:** max-w-6xl mx-auto px-6 (1152px max width, centered)
- **Card Border Radius:** rounded-2xl (16px)
- **Button Border Radius:** rounded-lg (8px) for primary, rounded-full for pill-style
- **Shadow:** shadow-sm for cards at rest, shadow-md on hover (subtle elevation change)
- **Grid:** 3-column on desktop, 2-column on tablet, 1-column on mobile

Animation Guidelines

- **Scroll Reveal:** Fade up + slight translateY (20px) with 0.5s ease-out, staggered 0.1s per item
- **Logo Strip:** Greyscale by default, color on hover with 0.3s transition
- **Buttons:** Scale 1.02 on hover, background color transition 0.2s
- **Navbar:** Backdrop blur + subtle shadow appears on scroll (sticky nav)
- **Job Cards:** Subtle border-color change and shadow lift on hover
- **No excessive animation:** Keep it professional, not playful

7. Section-by-Section Content Specification

7.1 Navbar

Sticky navigation bar that starts transparent over the hero, then gains a white background with backdrop blur and a subtle bottom shadow when the user scrolls past the hero section.

- **Left:** Keesamax logo (use existing logo from wp-content/uploads/2024/04/keesamax-logo-new.png)
- **Center/Right:** Anchor links: Services | Why Us | About | Jobs | Contact
- **Far Right:** Primary CTA button: 'Get in Touch' (scrolls to contact section)
- **Mobile:** Hamburger menu icon, full-screen overlay menu with same links
- **Behavior:** Active link highlights based on scroll position (Intersection Observer)

7.2 Hero Section

Full viewport height hero with a strong headline, supporting text, and two CTA buttons. Background can be a subtle gradient, a large AI-generated image with dark overlay, or clean white with an accent graphic element.

- **Headline:** 'Connecting Talent, Inspiring Growth'
- **Subheadline:** 'Boutique recruitment specialists helping companies across Southeast Asia find exceptional talent since 2013.'
- **CTA 1 (Primary):** 'Explore Our Services' (scrolls to services)
- **CTA 2 (Secondary/Outline):** 'View Open Positions' (scrolls to jobs)
- **Visual:** Consider a subtle animated gradient background or a hero image with overlay
- **Scroll Indicator:** Small animated chevron at the bottom indicating scroll

7.3 Social Proof / Client Logos

A horizontal strip of client company logos displayed in greyscale, transitioning to color on hover. This section should appear right after the hero to immediately establish credibility.

- **Label above logos:** 'Trusted by Leading Brands' or 'Companies We Have Partnered With'
- **Display:** Auto-scrolling carousel or static grid, logos in greyscale with color-on-hover

Logos to include (18 total):

- Cisco, Oracle, Orsted, Philip Morris, Google, IBM, Apple, Nielsen, Accenture, Maersk, Smith & Nephew, Abbott, Medtronic, Alcon, Randstad, Booking.com, AIG, Liberty Insurance

Logo Sourcing: Use SVG logos from official brand resource pages or brandfetch.com for consistent quality. Store in /public/logos/ directory. Ensure all logos are similar height (~40px) for visual consistency.

7.4 Services Section

Three service cards presented in a 3-column grid (stacking on mobile). Each card has an icon, title, and description. Consider a subtle border or background differentiation for each card.

Card 1: Recruitment of Skilled Professionals

We specialize in sourcing and placing highly qualified professionals across various industries and countries, ensuring the perfect match between candidate expertise and client needs.

Card 2: Executive Headhunting

Our targeted headhunting approach allows us to identify and attract top-tier talent who may not be actively seeking employment, providing clients with talents from specifically targeted companies.

Card 3: Career Coaching

Supporting individuals through career and outplacement coaching, ranging from personalized one-on-one sessions to group workshops to mitigate the impact of career transitions and empower individuals on their next professional journeys with confidence.

7.5 Why Us Section

Present the key differentiators as feature blocks or a two-column layout (image left, content right). This section should answer: why should a client choose Keesamax over larger agencies?

- **Tailored Solutions:** Delivering solutions aligned with client culture, budget, and specific requirements. Every client receives highest attention and support.
- **Multilingual Team:** Fluent in English, Malay, Mandarin, Cantonese, Hokkien, and German. Effective and personalized communication.
- **Diverse Expertise:** Consultants with diverse corporate backgrounds and extensive market knowledge across various industries and corporate structures.
- **Boutique Attention:** Not a volume-driven agency. Personal, relationship-driven approach to every placement.

7.6 About / Who We Are Section

Company story presented as a brief timeline or narrative. This section humanizes the brand.

Key Facts to Include:

- Founded in 2013 as Keesamac Enterprise (sole proprietorship)
- Incorporated as Keesamax Sdn Bhd in January 2024 (202401002894 / 1548744-K)
- Over a decade of headhunting and career coaching experience
- Placed candidates at all levels including C-suite executives

Industries Served:

Automotive, Construction, Engineering, Manufacturing, FMCG, Internet Technology, Bio Technology, Consumer Goods, Logistics, Education

Geographic Reach:

Malaysia (primary), Australia, China, Japan, Korea, Hong Kong, India, Singapore, Thailand, Vietnam

7.7 Industries Section (NEW)

A grid of industry badges or icon+label cards showing all industries Keesamax covers. This makes it easy for visitors to quickly see if their industry is covered. Use a clean tag/badge style with icons from Lucide.

7.8 Job Listings Section

The largest content section. Display job listings as cards in a grid or list layout with filtering capabilities.

Job Card Design:

- Job title (bold)
- Industry tag/badge
- Location with pin icon

- Experience requirement
- 'Apply' or 'Enquire' button (links to WhatsApp or contact form)

Filtering:

- Filter by industry (dropdown or tag buttons)
- Filter by location (e.g., KL, Selangor, Penang, JB, Singapore, Indonesia)
- Search by keyword

Data Structure (jobs.ts):

Each job should be a TypeScript object: { id, title, industry, location, experience, company_description, type }. Store all jobs in a /data/jobs.ts file that can be easily updated.

Current Job Listings (to be migrated):

General Listings:

Job Title	Industry	Location	Experience
Finance Manager	Apparel Manufacturing	Bandung, Indonesia	> 5 yrs
Lead Software Developer	Tech (Python/C++)	Singapore	> 10 yrs
BD & Marketing Manager	Logistics Hub	Shah Alam	> 10 yrs
Engineering Manager	Beverage Manufacturing	Johor Bahru	> 10 yrs
Sales Manager	Metal Manufacturing	KL	> 10 yrs
Procurement Manager	FMCG Manufacturing	Selangor	> 10 yrs
Finance Executive	Healthcare	Selangor	> 5 yrs
Senior Finance Executive	Healthcare	Penang	> 7 yrs
Sales Manager	Information Technology	KL	> 10 yrs
HR Manager	Retail	KL	> 7 yrs
Sales Representative	Medical Devices	Selangor/KL	> 7 yrs
Warehouse Senior Manager	FMCG Manufacturing	JB	> 10 yrs
Legal Counsel Manager	FMCG Manufacturing	Selangor	> 5 yrs
Asset Mgmt Executive	Leasing & Strategy	Cyberjaya	> 3 yrs
Sales Engineer	HVAC Industry	Sungai Buloh	> 5 yrs
Sales Coordinator	HVAC Industry	Sungai Buloh	> 3 yrs
Senior Brand Manager	FMCG Beverage	Kepong	> 5 yrs
Marketing Executive	FMCG Beverage	Kepong	> 2 yrs
Asst. Procurement Mgr	Manufacturing	Shah Alam	> 5 yrs
Senior Finance Exec	Manufacturing	Petaling Jaya	> 5 yrs
Finance Manager	Manufacturing	Shah Alam	> 7 yrs
HR Manager	E-Commerce/Logistics	Klang	> 5 yrs
Accounts & Admin Exec	E-Commerce/Logistics	Klang	> 5 yrs
Senior HR & Admin Exec	Construction	Klang	> 5 yrs
Sales Interior Designer	Construction	JB	3-5 yrs

Job Title	Industry	Location	Experience
Senior Interior Designer	Construction	JB	> 7 yrs
Gen & Modern Trade Mgr	FMCG Beverage	JB	> 5 yrs
China BD Manager	FMCG Beverage	JB	> 5 yrs
Product Specialist	FMCG	JB	> 5 yrs
Sales Manager	Manufacturing	Penang	> 7 yrs
Procurement Manager	Manufacturing	Penang	> 7 yrs

Construction Tech Company (SaaS) - Petaling Jaya, Hybrid:

Job Title	Industry	Location	Experience
UI/UX Product Consultant	Construction Tech (SaaS)	PJ - Hybrid	> 7 yrs
Front End Developer	Construction Tech (SaaS)	PJ - Hybrid	> 3 yrs
Solution Consultant	Construction Tech (SaaS)	PJ - Hybrid	> 5 yrs
Customer Success Manager	Construction Tech (SaaS)	PJ - Hybrid	> 7 yrs
Product Marketing	Construction Tech (SaaS)	PJ - Hybrid	> 7 yrs
HR/Finance Manager	Construction Tech (SaaS)	PJ - Hybrid	> 5 yrs
Sales Coordinator	Construction Tech (SaaS)	PJ - Hybrid	> 2 yrs
Implementer / QS - PM	Construction Tech (SaaS)	PJ - Hybrid	> 5 yrs

7.9 Contact Section

Two-column layout: left side has the contact form, right side has contact details and a WhatsApp CTA.

Contact Form Fields:

- Full Name (required)
- Email Address (required)
- Phone Number (optional)
- Message (required, textarea)
- CV Upload (optional, file input - PDF/DOC only, max 5MB)
- Submit button with loading state

Contact Details (Right Side):

- WhatsApp: +60 16-333 5597 (with clickable WhatsApp button)
- Email: (use a contact@keesamax.com or similar if available)
- Company: Keesamax Sdn. Bhd. [202401002894 (1548744-K)]

Form Backend Options:

- **Option A (Simplest):** Formspree.io - free tier allows 50 submissions/month, handles file uploads
- **Option B (More Control):** Next.js API route + Resend for email delivery
- **Option C (Zero Cost):** Google Forms embed (less elegant but free and reliable)

7.10 Footer

Dark navy background footer with:

- Keesamax logo (white version)
- Quick navigation links
- Contact info (phone, email, WhatsApp)
- Company registration: Keesamax Sdn. Bhd. [202401002894 (1548744-K)]
- Copyright notice
- Remove the 'Website managed by Exabytes' credit (no longer relevant)

8. SEO & Metadata Strategy

The current site uses Rank Math SEO on WordPress. When migrating to Next.js, SEO must be handled manually via Next.js metadata API. This is straightforward but must be done carefully to preserve rankings.

Metadata Configuration

In the `app/layout.tsx` file, configure the metadata export:

```
title: 'Keesamax Sdn Bhd | Recruitment & Executive Headhunting Malaysia'  
description: 'Boutique recruitment firm specializing in executive headhunting,  
skilled professional placement, and career coaching across Southeast Asia. Based in  
Malaysia, serving 10+ countries.'  
keywords: recruitment malaysia, executive headhunting, career coaching, HR  
consulting, talent acquisition, recruitment agency malaysia, headhunter malaysia  
openGraph: title, description, image (create a 1200x630 OG image), url:  
https://www.keesamax.com  
twitter: card: summary_large_image
```

Technical SEO Checklist

- Generate a `sitemap.xml` using `next-sitemap` package
- Create a `robots.txt` allowing all crawlers
- Implement canonical URLs to prevent duplicate content
- Add structured data (JSON-LD) for Organization and JobPosting schemas
- Ensure all images have descriptive alt text
- Set up proper heading hierarchy (single H1 per page, H2 for sections, H3 for subsections)
- Configure 301 redirects if any URL structure changes (unlikely since it's a single-page site)
- Submit new sitemap to Google Search Console after deployment
- Verify site ownership in Google Search Console via DNS TXT record

URL Structure

Since the current site is a single-page site with anchor links (`#what-we-do`, `#why-use-us`, etc.), and the new site maintains this structure, there should be no broken URLs. The main URL `https://www.keesamax.com/` remains the same.

9. Third-Party Integrations

Integration	Purpose	Implementation
WhatsApp Business	Direct client/candidate communication	wa.me/60163335597 link, floating WhatsApp button in bottom-right corner
Google Analytics / Vercel Analytics	Traffic and behavior tracking	Vercel Analytics (built-in) or GA4 via next/script
Google Search Console	SEO monitoring and indexing	Verify via DNS TXT record in Plesk
Formspree / Resend	Contact form email delivery	API integration for form submissions
next-sitemap	Auto-generate sitemap.xml	Build-time generation, configure in next-sitemap.config.js

WhatsApp Floating Button

Add a floating WhatsApp button (green, circular, bottom-right corner, 60x60px) that links to wa.me/60163335597. This is a common pattern for Malaysian business websites and makes it easy for visitors to initiate contact. Use a subtle entrance animation (scale up after 3 seconds) and ensure it doesn't overlap with the contact section's own WhatsApp CTA when scrolled to the bottom.

10. Performance Requirements

Target Core Web Vitals

Metric	Target	Strategy
LCP (Largest Contentful Paint)	< 2.5s	Optimize hero image, use next/image, preload fonts
FID (First Input Delay)	< 100ms	Minimal JS, static generation, code splitting
CLS (Cumulative Layout Shift)	< 0.1	next/font for fonts, explicit image dimensions
Lighthouse Performance Score	> 95	Static export, optimized images, minimal dependencies
Time to First Byte (TTFB)	< 200ms	Vercel edge CDN, static pages served from cache

Optimization Strategies

- **Images:** Use next/image for automatic WebP conversion, lazy loading, and responsive sizes. Store original images in /public/images/
- **Fonts:** Self-host Inter via next/font/google. No external font requests.
- **JavaScript:** Minimal client-side JS. Most of the site is static content. Only interactive elements (form, job filter, mobile menu) need client components.
- **CSS:** Tailwind CSS with purging removes unused styles automatically.
- **Bundle Size:** Keep total JS bundle under 100KB gzipped. Avoid heavy libraries.

11. Project File Structure

This is the recommended file structure for the Next.js project. Use this as the starting point in Claude Code.

```
keesamax/
|-- app/
|   |-- layout.tsx # Root layout with metadata, fonts, analytics
|   |-- page.tsx # Main page composing all sections
|   |-- globals.css # Tailwind imports + custom CSS variables
|   |-- favicon.ico
|   |-- api/
|   |-- contact/
|   |-- route.ts # Contact form API endpoint
|
|-- components/
|   |-- Navbar.tsx # Sticky navigation with scroll behavior
|   |-- Hero.tsx # Full-viewport hero section
|   |-- ClientLogos.tsx # Social proof logo carousel/grid
|   |-- Services.tsx # Three service cards
|   |-- WhyUs.tsx # Differentiators section
|   |-- About.tsx # Company story / timeline
|   |-- Industries.tsx # Industry coverage badges
|   |-- JobListings.tsx # Filterable job board
|   |-- Contact.tsx # Contact form + details
|   |-- Footer.tsx # Site footer
|   |-- ui/
|
|   |-- Button.tsx # Reusable button component
|   |-- SectionHeading.tsx # Reusable section heading with subtitle
|   |-- JobCard.tsx # Individual job listing card
|   |-- IndustryBadge.tsx # Industry tag component
|   |-- ScrollReveal.tsx # Framer Motion scroll animation wrapper
|
|-- data/
|   |-- jobs.ts # Job listings data array
|   |-- services.ts # Service descriptions

|   |-- keesamax-logo.png # Company logo
|   |-- keesamax-logo-white.png # White version for dark backgrounds
|
|-- lib/
|   |-- utils.ts # Helper functions (cn, formatters)
|
|-- next.config.ts # Next.js configuration
|-- tailwind.config.ts # Tailwind configuration with custom theme
|-- tsconfig.json # TypeScript configuration
|-- package.json
|-- next-sitemap.config.js # Sitemap generation config
```

```
| -- .env.local # Environment variables (form API keys)
| -- README.md
```

12. DNS & Domain Migration Checklist

Pre-Migration

- Create a full backup of the WordPress site in Plesk (Back Up / Restore)
- Document all current DNS records from Plesk (screenshot the DNS zone)
- Verify if @keesamax.com email is actively used (check Plesk Mail settings)
- Note down all current MX records and TXT records (SPF, DKIM, DMARC)
- Test the new Next.js site thoroughly on Vercel's preview URL
- Verify all content has been migrated (compare section by section)
- Test contact form end-to-end on preview deployment
- Run Lighthouse audit on preview deployment (target > 95 performance)

Migration Steps

1. In Vercel Dashboard: Go to Project Settings > Domains > Add 'keesamax.com' and 'www.keesamax.com'
2. Vercel will show you the required DNS records
3. In Plesk: Go to Websites & Domains > keesamax.com > Hosting & DNS > DNS Settings
4. Update the A record for @ to point to 76.76.21.21
5. Add/update CNAME record for www to point to cname.vercel-dns.com
6. Do NOT touch MX records, SPF records, or DKIM records
7. Wait for DNS propagation (check with dnschecker.org)
8. Vercel will automatically provision SSL once DNS resolves
9. Verify site loads on keesamax.com and www.keesamax.com
10. Submit new sitemap to Google Search Console

Post-Migration

- Monitor Google Search Console for crawl errors over the next 2 weeks
- Check that email delivery still works if using @keesamax.com
- Run a full Lighthouse audit on the live production URL
- Test all contact form submissions go through correctly
- Verify WhatsApp link works on mobile and desktop
- Optional: After confirming everything works for 30 days, consider migrating email to Google Workspace and canceling the Plesk/MSC Hosting plan to save monthly costs

13. Image & Asset Strategy

AI-Generated Images

Use AI image generation (Midjourney, DALL-E, or Flux) to create custom, authentic-looking images for the site. This avoids generic stock photography and gives the site a unique feel. Below are recommended prompts:

Hero / Banner Image:

"Cinematic wide-angle photograph of the Kuala Lumpur skyline at golden hour viewed from a high-rise executive office, silhouette of a confident business professional standing by the window looking out over the city, warm orange and blue tones, aspirational and premium feel, high quality editorial photography style"

Recruitment / Headhunting:

"Professional photograph of a diverse hiring panel interviewing a confident candidate, modern corporate office setting in Malaysia, three interviewers reviewing resumes at a long conference table, soft overhead lighting, clean and professional editorial photography style"

Career Coaching:

"Professional photograph of a one-on-one career coaching session, a female career coach sitting across from a young professional at a small round table in a bright modern coworking space in Kuala Lumpur, both smiling and engaged in discussion, notebooks and coffee on the table, warm natural light from large windows, editorial photography style"

Corporate Team:

"Professional photograph of a diverse team of Malaysian recruitment consultants walking confidently through a modern glass-walled office corridor, business professional attire, natural daylight streaming through windows, dynamic motion captured mid-stride, high quality editorial photography style"

Industry / Engineering:

"Professional photograph of a senior engineer in safety gear being welcomed by a corporate HR manager in business attire at a petrochemical plant entrance in Southeast Asia, industrial backdrop with refinery towers, both shaking hands symbolizing successful placement, golden hour lighting, editorial photography style"

Client Logos

- Source SVG logos from official brand resource pages or brandfetch.com
- Normalize all logos to the same height (approximately 40px)
- Store in /public/logos/ as SVG files for best quality
- Name files consistently: cisco.svg, oracle.svg, google.svg, etc.
- Apply CSS greyscale filter by default, remove filter on hover for color effect

Existing Assets to Preserve

- Keesamax logo (current): wp-content/uploads/2024/04/keesamax-logo-new.png.webp
- Keesamax logo white: wp-content/uploads/2024/03/keesamax-logo-new-white.png.webp
- Download both logos from the current WordPress site before migration

14. Timeline & Phases

Phase	Tasks	Duration	Status
